

Serial No. 10/061,364

Docket No. CIT/K-0138

Amdt. dated April 26, 2007

Reply to Office Action of December 29, 2006

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A copy protection method for digital media, the method comprising the steps of:

(a) encrypting an original media data set with a media key having a symmetric algorithm and encrypting said media key with public key of compliant device;

(b) delivering said encrypted media data set and said encrypted media key to a compliant playing device, wherein said original media data set includes an owner watermark containing an owner identification and owner copy-control information for the media data set;

(c) decrypting said delivered media key with a private key of said playing device;

(d) decrypting said delivered media data set with said decrypted media key;

(e) adding a player watermark to said decrypted media data set if said decrypted data set is not marked with at least "free copy", said player watermark containing a player identification of said playing device and player copy-control information, wherein said player copy-control information is derived from said owner copy-control information; and

(f) encrypting said watermark-added media data set with said decrypted media key and encrypting said decrypted media key with said public key of compliant device, and passing

said encrypted watermark-added media data set and said encrypted media key to a recording device; and or

(g) performing a compliance test with a displaying device and if said compliance test is successful, passing said watermark-added media data set and said decrypted media key encrypted in the step (f) to an external compliant device to said displaying device, wherein said passing step includes performing a compliance test with the external device, wherein said compliance test is selectively performed responsive to whether the media data set is protected and a type of the external device.

2. (Previously Presented) The method of claim 1, wherein said public key corresponds to an asymmetric algorithm.

3-4. Canceled

5. (Currently Amended) A copy protection method for digital media, the method comprising the steps of:

(a) encrypting an original media data set with a media key having a symmetric algorithm and encrypting said media key with public key of compliant device;

(b) delivering said encrypted media data set and said encrypted media key to a compliant playing device, wherein said original media data set includes an owner watermark containing an owner identification and owner copy-control information for the media data set, wherein the encrypted media data set can be delivered if the owner copy-control information does not indicate "copy-protected";

(c) decrypting said delivered media key with a private key of said compliant device;

(d) decrypting said delivered media data set with said decrypted media key;

(e) adding a device watermark to said decrypted media data set if said decrypted data set is not marked with at least "free copy", said device watermark containing a device identification of said compliant device and copy-control information, wherein said copy-control information is derived from said owner copy-control information;

(f) performing a compliance test through an authentication handshake process between said compliant device and ~~external~~ a displaying device; and

(g) transferring said watermark-added media data set to said ~~external~~ displaying device only if said ~~external~~ displaying device passes said test, ~~wherein said performing step selectively performs said compliance test depending on whether the media data set is protected or a type of the external device.~~

6. (Previously Presented) The method of claim 5, wherein said public key corresponds to an asymmetric algorithm.

7-8. Canceled

9. (Previously Presented) The method of claim 5, wherein said copy-control information is set to "for display only".

10. (Canceled)

11. (Currently Amended) A copy protection method for digital media, the method comprising:

(a) receiving an encrypted media data set, a control information, and an encrypted media key, wherein the encrypted media data is generated by an original media data set with a media key and the encrypted media key is generated by encrypting said media key with a public key of compliant device, wherein the control information includes owner identification of media data set and a copy control information to indicate whether a copy of the media data set permitted;

(b) decrypting said received media key with a private key of said compliant device, and decrypting said received media data set with said decrypted media key;

(c) adding a device information to the media data set to indicate an origin of the media data set, said device information including a device identification and copy-control information, wherein said copy-control information is derived from said owner copy-control information; and

(d) outputting said media data set to which the device information is added, to an external device, wherein said outputting comprises (e) if said external device is a recording device, encrypting said media data set with said decrypted media key prior to said outputting, and (f) if said external device is a displaying device, performing a compliance test with the external said displaying device prior to said outputting, wherein the compliance test is optionally performed depending on at least one of whether the media data set is protected or a type of the external device.

12. (Canceled)

13. (Currently Amended) The method of claim ~~12~~ 11, ~~further comprising: wherein said compliance test is performed performing through~~ an authentication process between said compliant device and ~~the external said displaying device prior to outputting said media data set~~

~~to which the device information is added,~~ wherein ~~the~~ said step (d) outputs ~~the~~ said media data set to which the device information is added only if ~~the~~ said authentication is successful.

14.-20. (Canceled)

21. (New) The method of claim 1, wherein said player copy-control information is set to “for display only” if said media data set is passed to said displaying device.

22. (New) The method of claim 11, wherein said player copy control information is set to “for display only” if said media data set is passed to said displaying device.
